

3D Visualization - Fort Point Channel Park

These two visualizations are rough sketches of a proposed park in the new South Fort Point neighborhood. This is an area currently occupied by the Gillette factory and numerous parking lots. The new development will feature a park between the channel and A St, and to its south will be residential and mixed-use buildings.

The top visualization gives a more aerial view of the site. This angle gives a better sense of scale and proportion of area of the site's area, as well as an ability to highlight new buildings (greyed) in comparison to old construction.

The bottom visualization, a lower angle and closer to a perspective shot, reveals how the new buildings frame the park with almost a wall, save for the few streets cutting through the buildings parallel to A St. It also emphasizes how the park will open a clear view of the channel from the A St corridor.
